# Table of Contents

## INTRODUCTION
Jonathan B. Martin, Carol M. Wicks, John E. Mylroie ................................................................. 1

## FLOW IN KARST: DIFFUSE AND CONDUIT .............................................................. 4
Conduit morphology and hydrodynamics of the Floridan aquifer:
Moving to the next level—conduit modeling
William L. Wilson ......................................................................................................................... 5
Ground water flow in karst: Matrix flow and conduit flow with implications for the Floridan aquifer
William B. White .......................................................................................................................... 9
Facies control on matrix permeability in the upper Floridan aquifer, west-central Florida:
Implications to diffuse flow
David A. Budd and H. L. Vacher ................................................................................................. 14
New views of the karstic porosity system within Pleistocene high-frequency carbonate cycles of the Biscayne aquifer, southeastern Florida
New approaches in modeling and characterization of karst aquifers (abstract)
Steffen Birk, Rudolf Liedl, and Martin Sauter ............................................................................. 27
Karstic functioning in chalk aquifer: The example of Lys springs (France)
Abdelkabir Maqsoud ................................................................................................................. 32
Interaction of fracture and conduit flow in the evolution of karst aquifers
Douchko Romanov, Wolfgang Dreybrodt, and Franci Gabrovsek ............................................ 38
Surface water control of gradients in the Floridan aquifer: Observations from the Santa Fe River Sink-Rise system
Lauren A. Smith, Jonathan B. Martin, and Elizabeth J. Screaton ................................................ 44
Sinkhole activity in Florida: Causes, occurrences, and solutions
A. F. Randazzo, D. L. Smith, K. H. Commins, and B. Dodek .................................................. 49

## SPECIATION: ENERGETICS AND BARRIERS ......................................................... 52
The Florida karst and its unique subterranean fauna
Richard Franz ............................................................................................................................... 51
Florida and Caribbean karsts:
An overview of diversity and origins of the obligate invertebrate cave faunas
Stewart B. Peck .......................................................................................................................... 53
Patterns of species richness in the Florida stygobitic fauna
David C. Culver and Horton H. Hobbs III .................................................................................. 60
Biodiversity associated with anoxic, sulfidic environments in west central Florida cave systems
K. Michael Garman .................................................................................................................... 64
Energy budgets in restricted environments: Islands, caves, benthos, and burrows
Brian K. McNab ........................................................................................................................ 66

## GEOCHEMISTRY: AGE, RESIDENCE TIME, AND DEEP INPUT ............................. 68
Geochemical and isotopic studies of paleowaters and recent recharge in parts of the Floridan aquifer system of Florida and Georgia
L. Niel Plummer .......................................................................................................................... 69
Hydrogeochemistry of a karst escarpment
Sam B. Upchurch ...................................................................................................................... 73
Using spring-water chemistry to assess groundwater contamination and ages of shallow and deep ground water flow systems
Brian G. Katz, J. K. Böhlke, and David Hornsby

Hydrochemical processes and cave development, Caribbean coast, Yucatan peninsula, Mexico
Peter L. Smart Patricia Beddows, Stefan Doerr, Samantha Smith, and Fiona F. Whitaker

MICROBIOLOGY: REDUCED AND OXIDIZED SYSTEMS

Microbes and energy acquisition in subterranean habitats
Aaron L. Mills

Microbial mediation of dissolved sulfide oxidation and its role in speleogenesis
Janet S. Herman, and David A. Hubbard, Jr.

Subaqueous and subaerial speleogenesis in a sulfidic cave
Libby Stern, Annette Summers Engel, Philip C. Bennett, and Megan L. Porter

Distribution and sources of heterotrophic bacteria in wells, caves and springs of a karst aquifer in the midwestern U.S.
Samuel V. Panno, Keith C. Hackley, Hue-Hwa Hwang, and W. R. Kelly

ISLANDS: CONSTRAINTS IN TIME AND SPACE

A solution template for atoll and barrier reef morphology
Edward G. Purdy

A solution template for atoll and barrier reef morphology conservation of anchialine cave biodiversity
Thomas M. Iliffe

Biogeochemical processes that influence cave development within Bahamian carbonate platforms
Stephanie Schwabe

Karst flow systems in young carbonate islands
John E. Mylroie and John W. Jenson

A conceptual model for groundwater flow in the carbonate aquifers of the north coast of Puerto Rico in the vicinity of the Rio Grande de Manati
Ralph O. Ewers

Geology and hydrogeology of a karst limestone aquifer system on the north coast of Puerto Rico
Robert A. Renken, William C. Ward, Jesús Rodríguez-Martínez, and Fernando Gómez-Gómez

Does hydrogeology control the geomorphology of the north coast of Puerto Rico?
Ira D. Sasowsky

YUCATAN: FLORIDA EXPOSED

Groundwater flow and chemical interactions between ground water, limestone, and the atmosphere in an unconfined, coastal Yucatan aquifer
Ronald K. Stoessell

A fresh-salt water mixing mechanism in a coastal aquifer, Quintana Roo, Mexico
Kris Esterson

Hydrology, geochemistry and diagenetic potential of saline groundwaters:
Field results from the Bahamas and model studies
Fiona F. Whitaker, Gareth D. Jones, Ward E. Sanford, Peter L. Smart, Alicia M. Wilson

Density stratified groundwater circulation on the Caribbean coast of the Yucatan Peninsula, Mexico
P. A. Beddows, P. L. Smart, F. F. Whitaker, and S. L. Smith

The geochemistry and geomicrobiology of saline groundwaters: Yucatán Peninsula, Mexico
Samantha L. Smith, Fiona F. Whitaker, R. John Parkes, Peter L. Smart, Patricia A. Beddows, and Simon H. Bottrell

Preliminary analysis of the ecology of a cenote in Quintana Roo, Mexico, characterized by its extraordinary quantities of remipedes
Jill Yager and Michael E. Madden
